Thank you

Thank you for purchasing the SBH170, Samsung Stereo Bluetooth Headset. We hope you will be satisfied with your new headset. Please read the instruction manual to get started and to make the best use of the headset's features.

Drive safely

Using a mobile phone while driving creates a distraction to the driver which may increase the likelihood of an accident.

When using the phone while driving, keep conversations short and do not make notes or read documents. Before answering calls consider your circumstances. Pull off the road and park before making or answering calls when driving conditions require (e.g. bad weather, high traffic density, presence of children in the car, difficult junctions or manoeuvres.)

Remember, driving comes first, not the call!

Abide by local laws.

Check phone compatibility

The SBH170 is compatible with most Bluetooth¹ (see Glossary) phones that are compliant with Bluetooth version 1.1 or higher and support Advanced Audio Distribution profile, Audio Video Remote Control profile, Headset profile, and Hands-free profile². Glossary

- Bluetooth** is a radio technology developed to connect devices, such as mobile phones and headsets, without wires or cords over a short distance of approximately 10 metres. More information is available at www.bluetooth.com

- 2** **Bluetooth profiles** are protocols through which Bluetooth devices communicate with other devices. Bluetooth phones support different sets of profiles - most support the headset profile but some support the hands-free profile and others support both profiles. In order to support a certain profile, a phone manufacturer has to implement certain mandatory features within the phone's software.
- 3** **Pairing** creates a unique and encrypted communication link between two Bluetooth-enabled devices and allows them to communicate with each other. Bluetooth devices will not work if the devices have not been paired with each other.
- 4** **Passkey or PIN** is a secret code that needs to be entered on a phone in order to pair the phone with a Bluetooth headset. When you have already paired your phone with the headset, the phone and the headset will recognise each other and the phone will bypass the discovery and authentication process and automatically accept the transmission.
- 5** **Standby mode** is when the headset is passively waiting for a call. When you "end" the call on your mobile phone, the headset will go into Standby mode.
- 6** **Active mode** is when the headset has an active call in progress or music is being played.

字彙說明

- 1 藍芽是一種無線電科技，它可讓您在約 10 公尺的短距離內，不需使用電纜線或電線就可連接手機和耳機等各裝置。詳細資訊請上網 www.bluetooth.com。
- 2 藍芽模式為一種通訊協定。透過藍芽模式，藍芽裝置便可與其他裝置進行通訊。藍芽手機支援不同的模式組 - 大多支援耳機模式，但有些支援免持聽筒模式，其他則同時支援耳機和免持聽筒模式。為支援特定模式，手機製造商必須在手機軟體內執行特定的強制功能。
- 3 配對，可在兩個啓用藍芽的裝置間，建立特殊與加密的通訊連結，讓這兩個裝置彼此進行通訊。但若這各裝置之間沒有進行配對，便無法使用藍芽裝置。
- 4 識別碼或 PIN 碼是必須輸入手機的秘密編碼，輸入後才能將手機與藍芽耳機配對。將耳機與手機進行配對後，手機和耳機就能識別彼此，且手機將迴避發現與認證程序，並自動接受傳輸。
- 5 當耳機被動等待來電時，就是待機模式。「終止」手機通話時，耳機將進入 [待機] 模式。
- 6 當耳機正在通話中或音樂播放中，這就是啟動模式。
